Subject: Nuclear power and it's waste

Dear Blue Ribbon Commission Members,

The traffic from hauling dangerous radioactive waste back and forth over our public highways that would result from the proposed Savannah River Site recycling venture is frightening and unacceptable to we who live along these roadways. We don't want to be needlessly put in that kind of danger – unexpected highway crashes and spills happen all too often.

Phase out that radiation producing recycling site at SRS. Invest our taxpayer money in cleaner, healthier, safer green/alternative energy programs that also create many more jobs for the same dollar investment.

There are many emerging power generating systems that can be improved with much less damage to our environment and people. It's time to phase out Nuclear, Natural Gas, Coal and Oil.

Keep the nuclear waste contained where produced and avoid any chance of terrible accidents.

Sincerely,
Berton Gaines
Asheville,NC
